

STRATEGIC OBJECTIVES

- 1) Create a transnational Network of VET operators and start an exchange of shared ideas, experiences and good practices;
- 2) Research, build and share innovative and more flexible and sustainable learning methods and processes, involving a more efficient and effective use of modern technologies and human resources. This would also allow more equal opportunities of personal/professional growth and international mobility of teachers, trainers and operators within the EU. Finally it would promote social inclusion reducing school drop-out rates or socio-economic distress.
- 3) Reconsider the importance of productive system and manufacturing/crafts work in a modern perspective, combining tradition and innovation, experience and research, manual and technological skills, with a model based on the creation and acquisition of creative experience.
